-
- The diagram illustrates the construction of a 2D array from a 1D array. The top part shows a 1D array of 20 elements, represented by a single row of 20 blue squares. This array is partitioned into four groups of five elements each, indicated by four black dots to the left of the row. The bottom part shows a 2D array of 20 rows and 5 columns, represented by two rows of 10 blue squares each. Each row in the 2D array corresponds to one of the four groups from the 1D array, showing how the 1D array is mapped to a 2D structure.
